Fall 2013

ECON 4360

Economics of Telecommunications Networks

Tuesday and Thursday 4:35 p.m. - 5:55 p.m.

Instructor: *Mikhail Klimenko*

Office: *Old Civil Engineering (CE) building at 221 Bobby Dodd Way, Room 320*

Office Phone: *404-894-0353*

E-mail*: *Use the e-mail link on the t-square site of this course*

Office Hours: *TBA*

Course Webpage: *Important announcements and assignments will be posted on the t-square site set up for this course. All students must have access to the site and check it regularly.*

Course Overview

This course examines the economic, public policy, and business strategy issues related to the telecommunications industry. The aim of the course is twofold: first, to provide you with basic economics of competition, regulation and evolution of the telecommunications markets; and second, to show how public policy and business strategy perspectives can be employed to analyze the telecommunications industry in historical and future contexts.

We do not use a textbook in this course. Instead we will draw upon a series of papers, articles and chapters from edited volumes. Some of these reading materials are available on the World Wide Web. Articles in most journals are available in electronic format through Georgia Tech library. Those readings that are not available on the Web or through the library's database of electronic journals will be placed on reserve.

At the beginning of the course, classes will be primarily lectures, as we review the economics of networks and telecommunications regulation. The second half of the course will be conducted in a seminar style with occasional lectures. This means that students will be required to lead the

* E-mail caveat: Due to the large number of electronic messages, it will often not be possible for me to respond to individual electronic queries. Therefore, I urge you to be selective in sending me electronic mail, t-square messages, and etc. If you have questions, it would be best if you talk to me right before or after class or during the office hours.

discussion of some of the reading materials. Prior to each discussion, students are required to distribute to the class a summary of the key ideas and issues of the material they are assigned. This may be presented in the bullet form or in the form of PowerPoint slides.

Some of the classes will be devoted to the discussion of the Harvard Business School case studies. The cases can be purchased on-line at the HBS Publishing website:

<https://cb.hbsp.harvard.edu/cbmp/access/20538728>. Before the discussion, I will prepare a few questions based on the case and you will have to write a report addressing those questions. I encourage you to prepare the case in groups (2-3 students in each group) and to submit joint reports on the cases. Each member of a group consisting of three students should also submit his/her evaluation of the other members' contributions toward the preparation of the final report. The evaluations should be on a scale from 1 to 100 and should measure the relative efforts made by group members rather than the share of the total work done for the report. The evaluations by individual members should be submitted to me in sealed envelopes together with the group report on the case. I will average the contribution scores awarded to each member by his group and multiply these averages by the group's score for the project. These will be the scores for individual group members for the project. I will not grade projects submitted without evaluations from every group member.

You are required to write a final paper for this course. You can pick any topic related to economic or public policy issues in the telecommunications industry. After discussing your topic with me, you should submit a one-page outline of the paper, which is due October 10th. During the last week of classes, you will be asked to make a short presentation of the main ideas of your paper in class. You don't have to submit your paper at the time of presentation. The paper is due at the official time of the final exam. (We don't have the final exam but I use its official time as the due time for the final paper.)

Grades will be based upon the following items: class participation (10%), homework assignment (20%), leading the discussion of assigned readings (20%), case study reports (25%), and final research paper and its presentation (25%). For each assignment you will receive an absolute and a standardized score. The final grade will be calculated by taking the weighted average of your standardized scores for the assignments. The cutoff for an 'A' will be one-half standard deviation. The cutoff for a 'C' will be minus one-half standard deviation. 'B' will be between the cutoffs.

Attendance in class is required. Students are responsible for all class lectures, case studies, and required readings and are expected to have read the required materials before the beginning of each class.

If you are taking the class pass/fail, you need to attend the class regularly, take both Midterms, submit the research paper and the case reports, take part in the case discussions, and obtain a 'C' in the class to get a satisfactory grade.

Important announcements as well as messages to individual students will be sent via the t-square website. All students must have and use an account on this site, available through the OIT.

Class Schedule and Reading Assignments. (Subject to change as the course progresses.)

Weeks	Dates	Reading assignments
1	August 20	Introduction. Basics telecommunications concepts.
	August 22	
2	August 27	Industry Overview. Interactions among the production technology, regulatory policy, and industry structure. Natural Monopoly. <ul style="list-style-type: none"> W.W. Sharkey, "Representation of technology and production," in Martin Cave et al. (eds.), <i>Handbook of Telecommunications Economics</i>, Volume I, North-Holland: Amsterdam, 2002.
